

CYBER RESILIENCE BY KORDIA

Kordia secure AI services

ENABLED BY  CROWDSTRIKE

Assess, secure and manage AI adoption

kordia®

Enable AI innovation without compromising security

Organisations are rapidly adopting tools such as Microsoft Copilot, ChatGPT Enterprise and custom AI agents to improve productivity and automate business processes.

But as AI adoption accelerates, many organisations are finding it difficult to maintain visibility, governance and control over how these tools are being used.

Without appropriate safeguards, AI can increase the risk of sensitive data exposure, compliance breaches and the use of unsanctioned AI tools and services.

Whether you're starting to assess AI exposure, implementing governance-aligned controls, or seeking ongoing visibility and oversight, Kordia helps you assess, secure and manage AI adoption through a combination of advisory services, professional implementation and managed operations.

Are you facing these challenges?

Security teams have limited visibility into which AI tools are being used and how organisational data is interacting with them.

Your employees may be using unapproved AI tools without visibility from security teams.

Sensitive information may be exposed through AI prompts, uploads or integrations.

Leadership needs assurance that AI adoption is being managed responsibly.

Compliance obligations are becoming harder to manage.

AI governance policies are incomplete or untested.

If any of these concerns sound familiar, Kordia can help with the following services.

Secure AI assessment

Gain visibility into AI usage and risk

AI adoption is often happening faster than organisations can govern it. Our secure AI assessment provides the visibility needed to understand how AI is being used, where risks exist and what controls may be required.

YOU'LL GAIN:

01

Visibility into AI usage across the organisation

02

Identification of Shadow AI and unsanctioned AI tools

03

Insight into potential data exposure and compliance risks

04

Clear recommendations to support safe AI adoption

For the secure AI assessment Kordia deploys a CrowdStrike Falcon Guardian trial license in assessment mode to analyse AI activity and identify potential risks. The four-week assessment provides the information needed to determine appropriate governance, security controls and next steps before production rollout.

No existing CrowdStrike deployment is required, making it quick and easy to get started.

Secure AI implementation

Turn visibility into action

Kordia works with your organisation to deploy CrowdStrike Falcon Guardian into production and establishes the security controls, monitoring capabilities and governance-aligned configurations needed to support ongoing AI adoption.

YOU'LL GAIN:

01

Monitoring and reporting capabilities for AI activity and risk

02

Governance-aligned controls configured to support business and compliance requirements

03

Protection policies for sensitive and regulated information

04

A production-ready AI security capability

05

A secure foundation for expanding AI initiatives

Production deployment requires CrowdStrike Falcon Guardian licensing, which can be provided through Kordia.

Managed Secure AI service

Transform AI visibility into actionable insights through expert-led reviews, reporting and governance oversight.

YOU'LL GAIN:

01

Expert review of AI usage across applications, components and models

02

Ongoing assessment of AI-related risks and exposures

03

Review of AI policy violations and exceptions

04

Monthly reporting and governance insights

05

Actionable recommendations for improving controls and reducing AI risk

06

Escalation of critical AI-related exposures

Managed Service requires CrowdStrike Falcon Guardian licensing, which can be provided through Kordia.

At a glance

Secure AI assessment

Average timeframe: up to four weeks.

- ✓ Understand how AI is being used across your organisation
- ✓ Identify AI-related risks and governance gaps
- ✓ Understand potential data exposure risks
- ✓ Gain clear recommendations and next steps

Secure AI implementation

Average timeframe: six weeks but it can vary depending on your specific requirements.

- ✓ Establish governance-aligned AI security controls
- ✓ Reduce the risk of inappropriate AI usage
- ✓ Enable protection of sensitive information through policy enforcement
- ✓ Establish a production-ready AI security capability

Managed Secure AI service

Average timeframe: ongoing.

- ✓ Maintain oversight of AI usage and emerging risks
- ✓ Improve AI policy compliance and governance outcomes
- ✓ Receive ongoing insights and recommendations
- ✓ Support continuous improvement of AI security controls

Every organisation is at a different stage of its AI journey. Some start with an assessment to understand current usage and risks, while others are ready to implement controls and governance from day one. We'll help you choose the approach that best fits your environment and objectives.

Why Kordia?

A practical approach to AI security

Kordia combines cyber security expertise, managed security capabilities and AI governance advisory services to help organisations understand, govern and secure AI adoption.

From initial assessment through to production deployment and governance maturity, Kordia provides practical support to help organisations like yours manage AI risk while enabling innovation.

Where additional governance support is required, Kordia can provide the services to help develop AI policies, governance frameworks and risk management practices.

**ISO 27001 Certified
24/7 Security
Operations Centre**

**Critical infrastructure
entity**

**Local cyber security
expertise**

**On demand incident
response**

Sovereign by design

State owned enterprise

Five Eyes safe

Enabled by CrowdStrike

CrowdStrike Falcon Guardian provides visibility into how AI services are being used across the organisation, helping identify Shadow AI activity, monitor risk and support governance decisions.
